## SUMMARY

Data Analytics professional with hands-on experience building predictive models, analytical dashboards, and machine learning solutions using Python, SQL, and Power BI. Developed projects in customer satisfaction analytics, healthcare, and computer vision, applying exploratory data analysis, statistical techniques, and predictive modeling to solve real-world problems. Professional experience in software testing strengthened SQL-based data validation, root cause analysis, system reliability, and business process understanding.

## SKILLS

|                                        |                                                                                                           |
|----------------------------------------|-----------------------------------------------------------------------------------------------------------|
| <b>Data Acquisition and Wrangling:</b> | SQL, MS Excel, Python (Pandas, NumPy), Data Cleaning, Data Preprocessing                                  |
| <b>Analysis and Statistics:</b>        | Exploratory Data Analysis (EDA), Descriptive Statistics, Hypothesis Testing, Regression Analysis.         |
| <b>Machine Learning:</b>               | Scikit-learn, Linear Regression, Logistic Regression, Decision Trees, Classification, Predictive Modeling |
| <b>Visualization and Reporting:</b>    | Power BI, Tableau, Matplotlib, Seaborn                                                                    |
| <b>Development Tools:</b>              | Git, GitHub, Jupyter Notebook                                                                             |

## WORK EXPERIENCE

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |                     |
