SUMMARY

Data-driven problem-solver skilled in Python, SQL, and statistical analysis for actionable business insights. Built a churn analysis project identifying key user segments responsible for 40% of revenue loss, demonstrating strong analytical and storytelling skills. Proven ability to transform raw data into insights that support customer retention and growth strategies.

SKILLS

Data Acquisition and Wrangling:	SQL, MS Excel, Python (Pandas, NumPy)
Analysis and Statistics:	Exploratory Data Analysis (EDA), Statistical Analysis, Statistics
Modeling:	Machine Learning (Regression, Classification, Supervised and Unsupervised), Scikit-learn
Visualization and Communication:	Tableau, Matplotlib, Seaborn, Excel Dashboards
Development Tools:	Git / GitHub, Jupyter Notebook

WORK EXPERIENCE

GreenTech Softwares — Software Tester	Nov 2023 - May 2025
– Tested and identified bugs in a Hospitality Management Software.	
– Collaborated with developers to ensure smooth performance.	

PROJECTS

Steel Surface Defect Detection using CNN — Python, Streamlit	Link to GitHub
– Built and deployed a CNN-based Computer Vision system that classifies 6 steel surface defects with 92% accuracy, integrated Explainable AI (Grad-CAM), and optimized deployment using TensorFlow Lite (TFLite).	
Subscription Cohort Analysis — Maven Analytics	Link to GitHub
– Performed EDA and Data Cleaning on subscription data using Python to analyze churn and revenue trends.	
– Identified a 67% churn rate and 58-day average customer lifetime, highlighting key retention challenges.	
– Visualized insights through graphs (Pandas, Matplotlib, Seaborn).	
Diabetes Prediction ML Project — EDA, scikit-learn	Link to GitHub
– Performed EDA and built an end-to-end diabetes classifier with preprocessing, imbalance handling, and model benchmarking; Logistic Regression delivered the most stable performance (75% accuracy).	

EDUCATION

May 2025 - April 2026	Post Graduation in Data Science and Analytics
2018 - 2023	Bachelor's Degree [ENTC]
